Multi-purpose heater

for year-round bathroom comfort

Combining the functions of a ventilator, heater, and cooling fan, German Pool Multi-Purpose Bathroom Heater series (HTB-916) is set to transform any modern bathroom into a place where you yearn to stay.

With a space-saving petite design and anion technology that makes the air fresher and cleaner, the Multi-Purpose Bathroom Heater is suitable for all bathrooms, and caters to your everyday need throughout the year.

Significant functions and features

Equipped with PTC ceramic heating elements and two different speeds, HTB-916 heats up your bathroom in an instant, and circulates warm air to keep a constant temperature for a cozy bathing experience.

Turning on the Heat mode function not only evaporates the damp that causes a stuffy sensation, it also helps dry your laundry during humid weather. For just 2 hours in an enclosed environment, 3.5 kg of soggy laundry will be dried, and the total power consumption costs less than \$4.

Meanwhile, the Vent mode can extract all the steam and stale air in the bathroom to prevent breeding of mould fungus.

On hot days, the Fan mode will circulate fresh air to cool the stifling indoor environment, keeping the bathroom airy and comfy.

User-friendly design

The sealed waterproof shell of HTB-916 comes with an anti-water stagnation and anti-rust design, which ensures a clean and hygienic bathroom.

Large LCD display allows easy monitoring and control, while the wall-mounted magnetic holder for the remote gives you the freedom to place it anywhere you can easily access.

Flexible installation options

With the specially designed waterproof shell, three flexible installation options are made possible. Aside from being ceiling and wall mountable, HTB-916 can also be directly installed on a window, eliminating the need for heavy pipe works.
